Use acceleration due to gravity, $g = 9.81$ m/s^2

$v = v_o + at$	$v^2 = v_o^2 + 2as$	$s = \frac{1}{2}(v_o + v)t$	$s = v_o t + \frac{1}{2}at^2$
$v = v_o - gt$	$v^2 = v_o^2 - 2gs$	$s = v_o t - \frac{1}{2}gt^2$	
$v = \frac{\Delta x}{\Delta t}$	$a = \frac{\Delta v}{\Delta t}$	$\lvert R \rvert = \sqrt{x^2+y^2}$	$\theta = tan^{-1}\frac{y}{x}$
